

# The Greening of Health Care, Part II

September 24, 2009  
Events: 8:30am - 2:00pm

## **PLEASE REGISTER EARLY-SPACE IS LIMITED**

The Metropolitan Chicago Healthcare Council (MCHC) will be hosting an educational event and vendor exposition on September 24, 2009 at **Interiors for Business located at 409 N. River Street, Batavia, IL 60510.**

*Hospitals are the most complex building types and have a significant impact on the environment. Increasingly, health care organizations are embracing the social responsibility associated with green design and building operations. The resulting challenges include integrating environmental, health and safety concerns with green product design, lean and green operations and closed-loop supply chains. This session will focus on existing buildings and operations. Guest speakers will discuss strategies and tactics, environmental stewardship efforts, sustainable operations, green products and the linkages between the physical environment, health and well-being. Additionally, a select group of vendors will be presenting services and products that help create a greener healing environment.*
